

Making the lives of vets easier

Our history

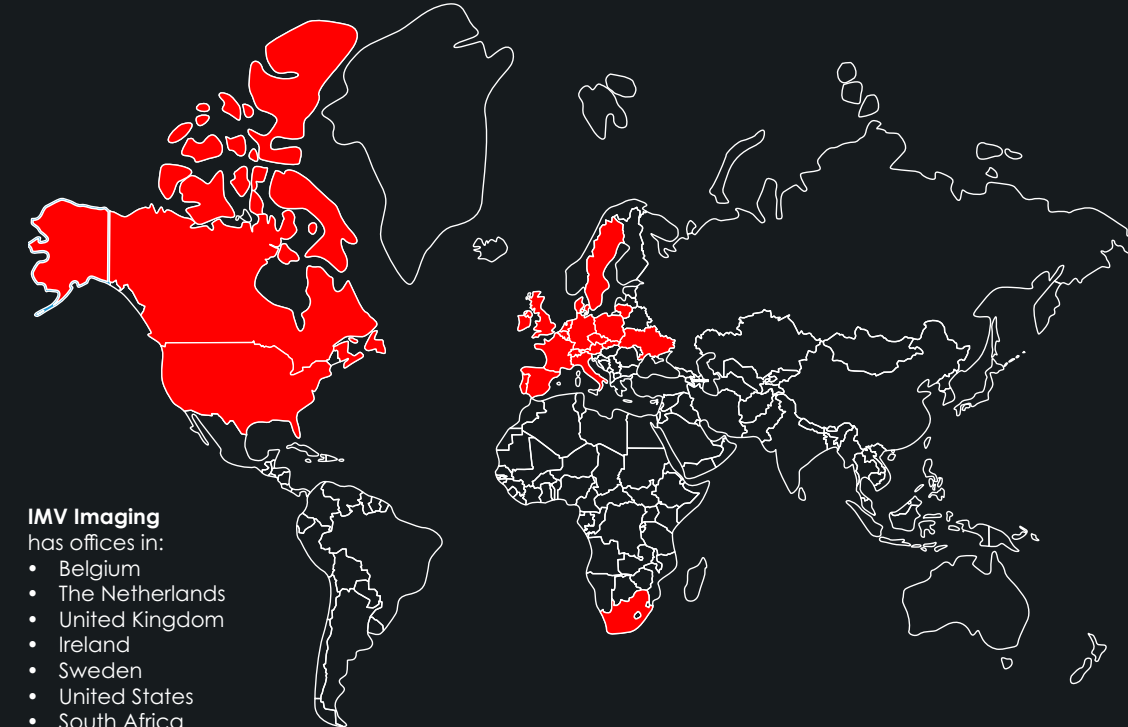

From vets, for vets

We know vets and we understand their needs

With our experience and passion for imaging, we create **top-quality** solutions for equine and small animal care. Veterinary Solutions BV started as an equine veterinary practice, so we know the challenges of working with horses and demanding clients. We design our products with one goal: **to be the best**; in image quality, durability, usability, and aftersales. With in-house software development, we've built both local and cloud PACS, along with advanced acquisition software.

Excellence in every detail

Our 3 strenghts

IMAGE QUALITY

As a company born from a veterinary practice, we understand that image quality is **your business card**. Our advanced processing algorithms, including AI and enhanced clarity, help you make a more accurate diagnosis.

PRODUCT

We designed our system and software from scratch, learning from the strengths and weaknesses of other systems. Our goal: to give you **the easiest, most user-friendly experience**; all in the lightest portable package.

SERVICE

Service is in our DNA. We **prevent** problems before they happen with cloud-based updates and monitoring. Need help? Our team is available **24/7** with immediate phone support for technical issues.

Experience our Image Quality

Company

What sets us apart

Always with you

Our 24/7 support and ongoing innovation ensure you always have the best solutions when you need them. We proactively prevent issues with smart monitoring and updates, keeping your workflow smooth and efficient.

If a problem arises, our expert team is just a phone call away, ready to provide immediate assistance in Dutch, English, French and German. By continuously improving our products with the latest technology and user feedback, we make sure you stay ahead with reliable, cutting-edge solutions.

Company

Support and Development

connectDR

Check our hardware

We believe veterinary imaging should be robust, user-friendly, and deliver **top-quality images**. In every clinic, connectDR ensures exceptional image clarity and seamlessly connects with our connect.vet system for a fully integrated workflow. Designed for real-world veterinary use, connectDR is sturdy, stable, and functional, featuring a glove-friendly touchscreen and a premium desktop PC; built to perform **whenever you need it**.

connectREADY

- **backup** of all images
- **security** updates
- superior **support**
- send emails from within our software
- compatible with connectPILOT
- can be upgraded to connectDR

connectDR

- full access to the **cloud** from everywhere (connect.vet)
- **import** dicom modalities: ultrasound images, CT, MRI
- integration with practice management software (PMS)
- superior image quality

connectPILOT

Take out the guesswork

It is unique in our market, it works like magic and once you have it, you wonder how you ever did without it: our connectPILOT. As a vet, you know that sometimes an **urgency** means moving **faster** than you can. Our connectPILOT is an **automatic** distance **measurement** device that take out the guesswork: place the animal on the table, select the menu (bodypart) and our software does the rest.

Products X-Ray

connect.vet

A PACS is often seen as a necessary evil. It is typically slow, requires servers with hard drives that can fail, has backups that never work when you need them, requires a lot of exporting and importing, and has complex settings that need IT specialists to manage.

connect.Vet is nothing like this; it is your daily tool to...

...share and visualize all kind of images,
but also create **reports**

...store x-ray, ultrasound, CT, MRI...
but also **videos** and **photos**

...communicate with other PACS,
and other **vets** and **clinics**

...publish studies to owners,
and share your **business cards**

...it works in your favorite browser
but also **local**

...it works on PC and Mac
but also on your **phone** (iOS and Android)

...it is really fast
but also **very reliable**

Learn more about connect.vet

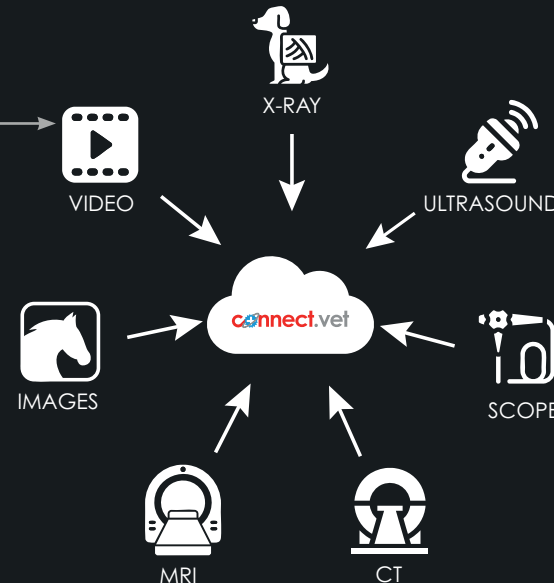

connect.vet

Products Software

connect.vet

connect.vet is the **central hub** for all your medical imaging. We offer seamless integration with most, if not all; devices, ensuring that every image (X-ray, ultrasound, CT, video, and more) is collected in a single study. Conveniently and securely stored in your private cloud, everything is **always within reach**.

UPGRADE PACKAGES AVAILABLE

Your detector stays, the future moves in.
Experience the difference!

Easily upgrade your existing system, step by step, to connect.vet: no need for a full replacement. Keep your current hardware while unlocking a modern, seamless imaging experience.

Is your computer getting old?

The robust desktop from DELL is fast, reliable and expandable.

The image quality is not optimal?

We developed our own cutting-edge image processing software for superior image quality

Would you like to email DICOMS – from anywhere?

An integrated email client makes it possible, no need for cumbersome exports

Is your PACS no longer up to date?

connect.vet is fully integrated, cloud based, fast and modern, ready for the future

connectRAY

Products Hybrid Solutions

We offer a wide range of portable and stationary X-ray generators, ensuring high-quality imaging tailored to your needs, with expert support at every step.

To fill a market gap, we developed connectRay; a lightweight, battery-powered generator offering a reliable solution. Its Bluetooth control **automatically adjusts** mAs and kV settings, eliminating manual adjustments for a seamless workflow, so you can focus on your patients.

REMOTE IMAGE PREVIEW

- Shows actual image being taken, no need to go back to your laptop
- Convenient retake button
- Mounted on the generator

Battery Powered
+500 exposures

90kV and 20mA
High performance

Small Focal Point
0.8mm → Sharper

Broad Diafragma
Closer → better image

Bluetooth
For control + preview

Protected Corners
→ longer lasting

connectRAY 1600 BT

connectRAY

Complete imaging solutions

esaote

In addition to X-ray, we offer a **range of advanced imaging solutions**, including ultrasound and endoscopy.

With high-quality equipment tailored to veterinary needs, we help you expand your diagnostic capabilities and provide the best care for your patients.

All these modalities **seamlessly integrate** with connect.vet, ensuring that every image, whether from X-ray, ultrasound, or endoscopy, is automatically stored in one central location.
